

Environmental Sustainability at BCG Connect

We are dedicated to being responsible stewards of our global ecosystem. Our entire team is focused on our sustainability initiative from the paper we use to our carbon footprint.

100%

of our production paper and cardboard waste gets recycled.

printreleaf™

We partnered with PrintReleaf to offer our clients a choice to join in our **Print One-Plant One** initiative.

We offer our clients a wide variety of paper choices, from recycled products to utilizing various products that follow FSC* and/or SFI* guidelines.

Choose Your Reforestation Location

Clients can participate in our Print One-Plant One program. **Choose your location** from around the world.

Measure Your Paper Use in Pounds of Paper

We use your paper consumption totals to calculate your paper footprint which is converted into a specific and accurate number of trees.

PrintReleaf Certificate and Dedicated Reports

You are empowered to releaf forests based on your paper footprint. PrintReleaf provides a dashboard about the forests you have releafed over time.

The most eco-friendly practices start with consuming only what is necessary. We track the usage of raw materials, making a concerted effort to reduce consumption.

We continue to make improvements aimed at reducing waste in our building. We have teams that meet periodically to discuss and access ways to improve and streamline our internal processes. With each improvement, we strive to use less resources, recycle more materials, or produce less waste.
