

**Help strengthen
our communities!**

Please make a gift meaningful to you that will not only affect current students, but the future of our communities.

At York College, experiential learning helps prepare our students, like Ally, Abigail, and Ethan, to not only become stellar professionals, but also to make a difference in the lives of individuals and the greater community. They participate in mentored research and hands-on internships across disciplines with community partners—all with the purpose of effecting change in their respective fields.

Your gift supports students who are working to strengthen our communities. You can immediately bolster scholarship support, travel funds to internships, and cooperative job experiences for our students when you make a gift to the York College Fund.

At York College, we take our role as leaders in our community seriously. You can split your gift to support the American Red Cross during this unprecedented time in our nation.

**American
Red Cross**

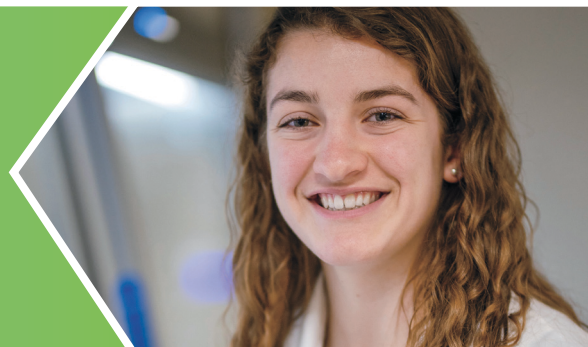

"The engineering fundamentals and specialized project opportunities, as well as the industry experience with medical diagnostic equipment, has solidified my interest in using my engineering skills to contribute to the medical field."

Abigail Wright '20, Mechanical Engineering Major
Kinsley School of Engineering, Sciences and Technology

"I have been able to use the laboratory skills I learned in biology to spend a year and a half doing cancer research for my senior thesis, and I plan to use the knowledge I gained to help me become a health professional and apply the scientific process every day to treat and heal patients."

Allyson "Ally" Badman '20, Biology Major
Kinsley School of Engineering, Sciences and Technology

"Giving back to the community is something I believe everyone should do. Through York College, I have been able to work with Nursing faculty to go into the public and teach the Stop The Bleed Program. [We work with] groups of citizens so that they are more informed and are more readily able to save lives if they would ever come into a situation like that."

Ethan Miller '20, Nursing Major
School of Nursing and Health Professions
